

Rosemount™ 228

Toroidal Conductivity Sensor

A Versatile Conductivity Sensor for Solving Diverse Application Challenges

Rosemount 228 toroidal conductivity sensors reliably measure conductivity in highly conductive electrolyte solutions up to 2 S/cm (2,000,000 μ S/cm). These sensors work in dirty and corrosive applications where metal electrode sensors would otherwise fail. A robust sensor design makes the Rosemount 228 ideal for measuring concentrations of acid, base, and salt solutions.

High Performance and Reliability

- Meet challenging application requirements with a selection of chemical resistant body options including PEEK and Tefzel
- High vibration tolerance with reinforced internal metal frame design
- High temperature option for process temperatures up to 392 °F (200 °C) and suitable for use under high pressure up to 295 psig (2135 kPa [abs])

Meet Your Process Mounting Needs

- Suitable for insertion and submersion type applications
- Versatile mounting options featuring either a 3/4 in. MNPT or 5/8 in. 11 UNC process connection
- Eliminate the need to shut down your process when removing sensors from piping and tanks by using an optional retraction assembly kit
