Specifications

This section lists the specifications of the Type T205B Balanced Tank Blanketing Regulator. Factory specification, such as maximum temperature, maximum inlet and outlet pressures, spring range and seat or orifice size are stamped on the nameplate fastened on the regulator at the factory.

Body Sizes and End Connection Styles

See Table 1

Maximum Allowable Inlet Pressure⁽¹⁾

See Table 1

Maximum Operating Inlet Pressure⁽¹⁾

Gray cast iron: 150 psig / 10.3 bar

WCC Carbon steel or CF8M/CF3M Stainless steel: 200 psig / 13.8 bar

Maximum Outlet (Casing) Pressure⁽¹⁾

Gray cast iron: 35 psig / 2.4 bar

WCC Carbon steel or CF8M/CF3M Stainless steel: 75 psig / 5.2 bar

Maximum Emergency Outlet Pressure to Avoid Internal Parts Damage⁽¹⁾

With Nitrile (NBR) or Fluorocarbon (FKM) diaphragm: 35 psig / 2.4 bar

With Fluorinated Ethylene Propylene (FEP) diaphragm: 10 psig / 0.69 bar

Outlet (Control) Pressure Range⁽¹⁾

See Table 2

Shutoff Classification per ANSI/FCI 70-3-2004

Class VI (Soft Seat)

Pressure Registration

External

Orifice Size

3/8 inch / 9.5 mm

Flow and Sizing Coefficients

See Table 4

C_v Coefficients

See Table 8

Flow Capacities

See Table 9

Material Temperature Capabilities⁽¹⁾⁽²⁾

Elastomer Parts

Nitrile (NBR):

-40 to 180°F / -40 to 82°C

Fluorinated Ethylene Propylene (FEP):

-20 to 180°F / -29 to 82°C

Fluorocarbon (FKM):

40 to 300°F / 4 to 149°C

Ethylene Propylene Diene (EPDM):

-20 to 225°F / -29 to 107°C

Perfluoroelastomer (FFKM):

0 to 300°F / -18 to 149°C

Body Materials

Gray cast iron: -20 to 300°F / -29 to 149°C

WCC Carbon steel: -20 to 300°F / -29 to 149°C

CF8M/CF3M Stainless steel:

-40 to 300°F / -40 to 149°C

Body and Casing Materials

Gray cast iron, WCC Carbon steel and

CF8M/CF3M Stainless steel⁽³⁾

Trim Materials

See Table 3

Spring Case Vent Connection

1/4 NPT

Diaphragm Case Control Line Connection

1/2 NPT

Approximate Weight

17.7 pounds / 8 kg

1. The pressure/temperature limits in this Bulletin or any applicable standard limitation should not be exceeded.

2. See Table 3 for operating temperature ranges for available trim combinations.

3. Pipe nipples and flanges are 316 Stainless steel for flanged body assemblies.

Introduction

Tank blanketing is the process of covering the surface of a liquid stored in a vessel with a gas, usually nitrogen and of maintaining a slightly positive pressure in an enclosed storage tank. Tank blanketing prevents a stored liquid from vaporizing into the atmosphere, reduces liquid combustibility and prevents oxidation or contamination of the liquid by reducing its exposure to air. This process is used in various products, such as adhesives, pharmaceuticals, pesticides, fertilizers, fuels, inks and food additives.

Type T205B balanced tank blanketing regulator (Figure 1) is a direct-operated regulator with fully balanced plug design to reduce inlet pressure sensitivity and with a large diaphragm to accurately control tank pressure at low pressure settings on tank blanketing systems. It uses a control line to sense the pressure in an enclosed storage tank. Type T205B maintains a slightly positive pressure and thereby reduces the possibility of tank wall collapse during pump out operation.

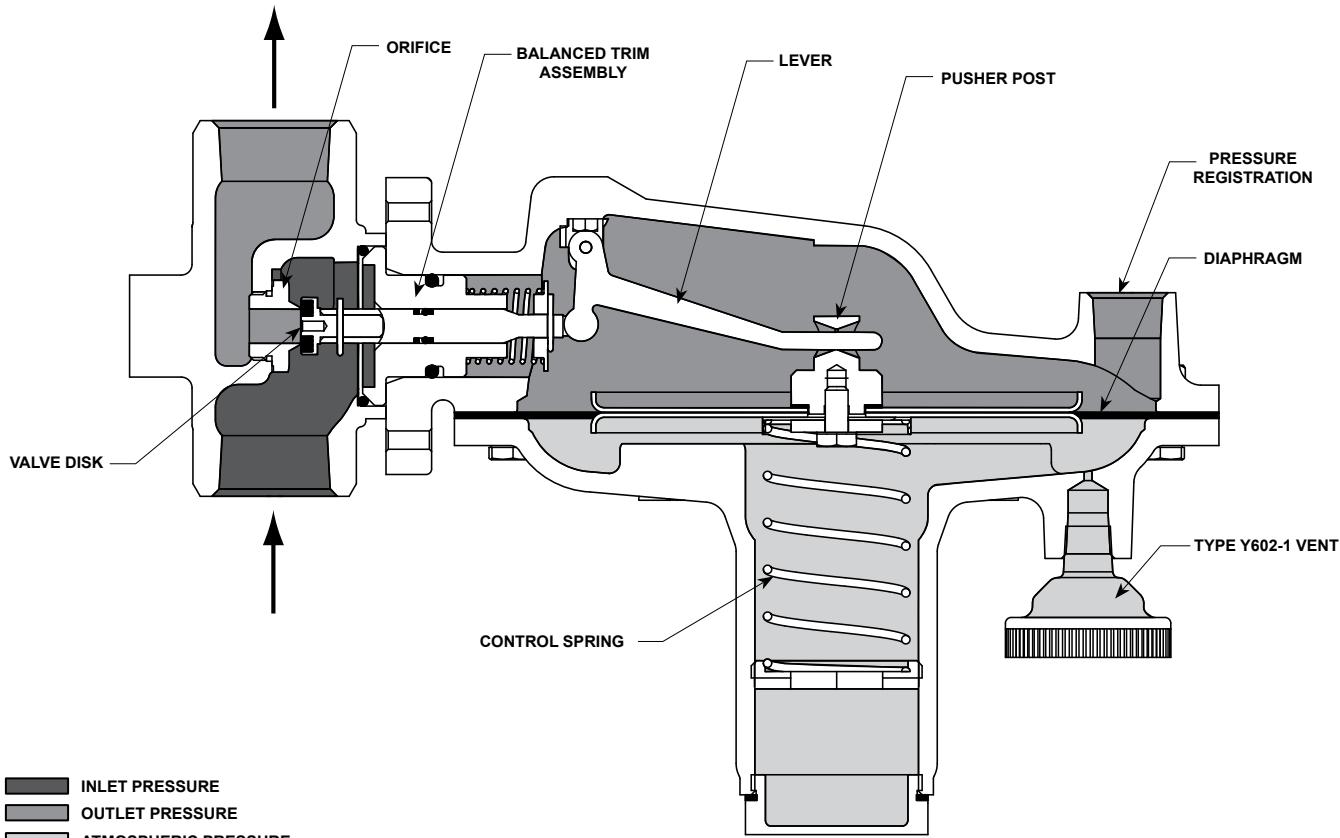

Figure 2. Type T205B Operational Schematic

Features

Fully Balanced Plug Design — Eliminates setpoint changes caused by varying inlet pressure. This design provides smooth opening of the plug for stable flow and greater regulating flow capacity.

Large Diaphragm — Highly sensitive to changes in tank pressure. Available in various materials to suit different applications.

Low-Pressure Setting and Fast Speed of Response — Applicable for low pressure setting as low as 1 inch water column / 2.5 mbar. Type T205B reacts quickly in changing tank vapor pressure due to direct-operated construction.

Accurate Control and Small Lockup Pressure — Type T205B has a large effective diaphragm area that detects small pressure change and provides accurate control at low pressure setting. Type T205B is a lever style regulator; this regulator style increases force for lockup, thus, shut off can be attained with small lockup pressure.

Sour Gas Service Capability — Available construction to meet NACE MR0175-2002.

Principle of Operation

Refer to Figure 2. Type T205B tank blanketing regulator controls the vapor space pressure over a stored liquid. When liquid is pumped out of the tank or vapors in the tank condense, the pressure in the tank decreases. Tank pressure is sensed by the actuator diaphragm. Spring force pushes the pusher post assembly, the valve disk moves away from the orifice, allowing the blanketing gas flow to increase.

When pressure in the tank increases, the actuator diaphragm is pushed. Through the action of the pusher post assembly, lever and valve stem, the valve disk moves closer to the orifice reducing blanketing gas flow.

The regulator plug is balanced (inlet pressure creates equal upward and downward forces on these components), therefore, the outlet (control) pressure of the unit is not affected by inlet pressure variation.

Bulletin 74.1:T205B

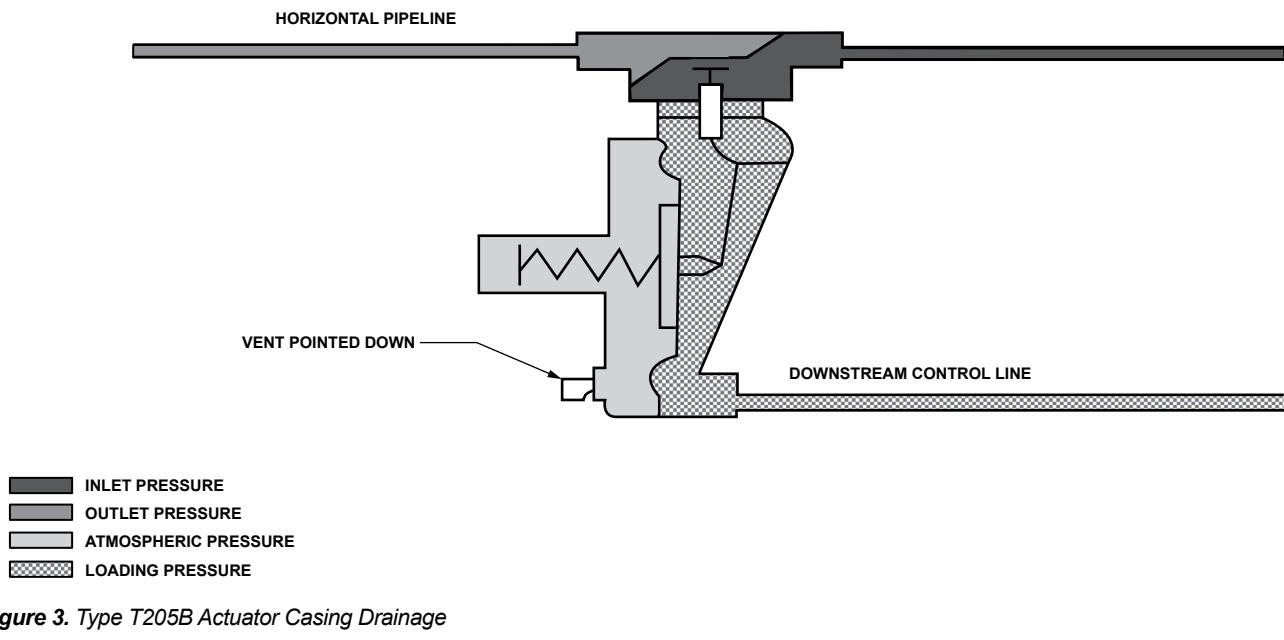

Figure 3. Type T205B Actuator Casing Drainage

Table 1. Body Sizes, End Connection Styles and Maximum Allowable Inlet Pressures

BODY SIZE		BODY MATERIAL	END CONNECTION STYLES ⁽¹⁾	MAXIMUM ALLOWABLE INLET PRESSURE	
Inch	DN			psig	bar
3/4 or 1	20 or 25	Gray cast iron	NPT	150	10.3
		WCC Carbon steel	NPT, CL150 RF, CL300 RF or PN 16/25/40 RF	200	13.8
		CF8M/CF3M Stainless steel ⁽²⁾			

1. All flanges are welded. Weld-on flange dimension is 14 inches / 356 mm face-to-face.
2. Pipe nipples and flanges are 316 Stainless steel for flanged body assemblies.

Installation

Type T205B regulator may be installed in any orientation as long as the flow through the body matches the direction indicated by the arrow on the body. To achieve the published capacities at low setpoint, the spring case barrel should be installed pointed down as shown in Figure 2. For complete actuator casing drainage, regulator should be installed as shown in Figure 3. To keep the vent assembly from being plugged or the spring case from collecting moisture, corrosive chemicals or other foreign material, point the vent down or otherwise protect it. If an indoor installation is required and if hazardous gas service is used, the vent should be piped outside. External dimensions and connections are shown in Figure 5.

Emerson Process Management Regulator Technologies, Inc. provides an instruction manual with every regulator shipped. Refer to this for complete installation, operation and maintenance instructions. Included is a complete listing of individual parts and recommended spare parts.

Overpressure Protection

Type T205B regulator has an outlet pressure ratings that are lower than its inlet pressure ratings. Install downstream overpressure protection if the inlet pressure can exceed the outlet pressure rating.

Refer to the Capacity Information section and the relief sizing coefficients in the Specification sections to determine the required relief valve capacity.

Universal NACE Compliance

Optional materials are available for applications handling sour gases. These constructions comply with the recommendations of National Association of Corrosion Engineers (NACE) sour service standards.

The manufacturing processes and materials used by Emerson assure that all products specified for sour gas service comply with the chemical, physical and metallurgical requirements of NACE MR0175-2002. Customers have the responsibility to specify correct materials. Environmental limitations may apply and shall be determined by the user.

Bulletin 74.1:T205B

Table 2. Outlet (Control) Pressure Ranges and Spring Information

OUTLET (CONTROL) PRESSURE RANGE		SPRING COLOR	SPRING WIRE DIAMETER		SPRING FREE LENGTH	
Inch w.c.	mbar		Inch	mm	Inch	mm
1.0 to 2.5 ⁽¹⁾⁽²⁾	2.5 to 6.2 ⁽¹⁾⁽²⁾	Orange	0.072	1.8	3.25	82.6
2.5 to 7.0 ⁽²⁾	6.2 to 17 ⁽²⁾	Red	0.085	2.2	3.63	92.2
7.0 to 16.0	17 to 40	Unpainted	0.105	2.7	3.75	95.2
0.5 to 1.2 psig	34 to 83	Yellow	0.114	2.9	4.31	109
1.2 to 2.5 psig	83 to 172	Green	0.156	4.0	4.06	103
2.5 to 4.5 psig	0.17 to 0.31 bar	Light Blue	0.187	4.8	3.94	100
4.5 to 7 psig	0.31 to 0.48 bar	Black	0.218	5.5	3.98	101

1. Do not use Fluorocarbon (FKM) diaphragm with this spring at diaphragm temperatures lower than 60°F / 16°C.
 2. To achieve the published outlet pressure range the spring case must be installed pointing down.

Table 3. Available Construction and Trim Materials

AVAILABLE CONSTRUCTION MATERIALS					AVAILABLE TRIM OPTIONS			
Body and Casing	Guide Insert	Diaphragm Head	Lever Assembly and Bias Spring	Stem	Trim Option Code	Diaphragm Material	Disk and O-ring Material	Operating Temperature Ranges

1. Flash point is below 100°F / 38°C or normal boiling point is below 300°F / 149°C.

Table 7. Correction Factors (For Converting Air Flow Rates to Other Gas Flow Rates)⁽¹⁾

BLANKET GAS	SPECIFIC GRAVITY	CORRECTION FACTOR
Natural Gas	0.60	1.291
Nitrogen	0.97	1.015
Dry CO ₂	1.52	0.811

1. For gases of other specific gravities, use equation below.
 Correction Factor = $\frac{1.00}{\sqrt{SG}}$

Sizing Blanketing Systems

When sizing a gas blanketing regulator system for a low-pressure blanketing application, consider the replacement of blanketing gas required for the liquid loss during pump out of the vessel plus the condensation/contraction of vessel vapors during atmospheric thermal cooling. Using the established procedures from American Petroleum Institute Standard 2000 (API 2000), determine the flow rate of blanketing gas required.

$$Q_{\text{total}} = Q_{\text{pump}} + Q_{\text{thermal}}$$

Where,

Q_{total} : Required Flow Rate.

Q_{pump} : Required Flow Rate to replace pumped out liquid.

Q_{thermal} : Required Flow Rate due to thermal cooling.
 (See Table 6)

Capacity Information

Capacity tables are based on 1.0 specific gravity air. If other blanketing gas is used, convert the tabular values as follows. For blanketing (pad) gases other than air, multiply the given air flow rate by

the correction factors in Table 6. For gases of other specific gravities, divide the given air flow rate by the square root of the appropriate specific gravity.

Ordering Information

When ordering, complete the ordering guide on this page. Refer to the Specifications section on page 2. Review the description to the right of each

specification and the information in each referenced table or figure. Specify your choice whenever a selection is offered.

Ordering Guide

Body Size (Select One)

- 3/4 inch / DN 20***
- 1 inch / DN 25***

Body Material and End Connection Style (Select One)

Gray Cast Iron

- NPT***

WCC Carbon Steel

- NPT***
- CL150 RF***
- CL300 RF***
- PN 16/25/40 RF*** specify rating _____

CF8M/CF3M Stainless steel⁽¹⁾

- NPT***
- CL150 RF***
- CL300 RF***
- PN 16/25/40 RF*** specify rating _____

Outlet (Control) Pressure Range (Select One)

- 1 to 2.5 inches w.c. / 2.5 to 6.2 mbar, Orange***
- 2.5 to 7 inches w.c. / 6.2 to 17 mbar, Red***
- 7 to 16 inches w.c. / 17 to 40 mbar, Unpainted***
- 0.5 to 1.2 psig / 34 to 83 mbar, Yellow***
- 1.2 to 2.5 psig / 83 to 172 mbar, Green***
- 2.5 to 4.5 psig / 0.17 to 0.31 bar, Light Blue***
- 4.5 to 7 psig / 0.31 to 0.48 bar, Black

Trim Material (See Table 3, Select One)

- Standard***
- NN***
- VV***
- TV***
- TK***
- TE***

Adjusting Screw (Select One)

- Internal Flat Circular (**standard**)***
- External Square Head (Available for Green, Light blue and Black springs only. Steel closing cap is automatically supplied in this option)***

Closing Cap Material (Select One)

- Plastic (**standard**) (not available for Green, Light blue and Black springs)***
- Steel (**standard** for Green, Light blue and Black springs)***
- Stainless steel***

Body Position (See Figure 4, Select One)

- Position 1 (**standard**)***
- Position 2***
- Position 3***
- Position 4***

Spring Case Orientation/Vent Type (Select One)

- Spring Case Side (Type Y602-12) (**standard**)***
- Spring Case Down (Type Y602-1)***
- Spring Case Up (Type Y602-11)***

Vent Position (See Figure 4, Select One)

- Position A (**standard**)***
- Position B***
- Position C***
- Position D***

316 Stainless steel Trim Parts (Select One)

- Yes
- No

Replacement Parts Kit (Optional)

- Yes, send one replacement parts kit to match this order.

1. Pipe nipples and flanges are 316 Stainless steel for flanged body assemblies.

Bulletin 74.1:T205B

Regulators Quick Order Guide	
***	Readily Available for Shipment
**	Allow Additional Time for Shipment
*	Special Order, Constructed from Non-Stocked Parts. Consult your local Sales Office for Availability.
Availability of the product being ordered is determined by the component with the longest shipping time for the requested construction.	

Specification Worksheet

Application (Please designate units):

Specific Use _____

Line Size _____

Fluid Type and Specific Gravity _____

Fluid Temperature _____

Does the Application Require Overpressure Protection?

Yes No If yes, which is preferred:

Relief Valve Monitor Regulator Shutoff Device

Is overpressure protection equipment selection assistance desired? _____

Pressure:

Maximum Inlet Pressure _____

Minimum Inlet Pressure _____

Differential Pressure _____

Set Pressure _____

Maximum Flow (Q_{max}) _____

Performance Required:

Accuracy Requirements?

Less than or Equal to:

5% 10% 20% Wide Open

Other Requirements:
